WEIGHT DISTR.: FR/RR 54%/46%
A SUPERCAR, THAT SCULPTS THE WIND.

Rather than being designed to the demands of aerodynamics, the GT-R sculpts the air to its needs, becoming a force of nature as well as a force to be reckoned with. Instead of treating it like an enemy, the GT-R makes it an ally by creating a vortex on the front fascia that sends swirling air to the wheels, cooling the brakes and enhancing efficiency.
MILLIMETER BY MILLIMETER, SHAPED TO PERFECTION.

Obsession to detail means scrutinizing even the smallest item. A 1% energy loss found around the C-pillar was enough for the GT-R’s fanatical engineers to redesign the pillar and create a cleaner design.
IN THE OCEAN OF AIR
IT'S A SHARK.
0.26 COEFFICIENT OF DRAG (Cd)
Today, with a canard-shaped lip on the front fascia, a re-shaped C-Pillar and extensions on the lower rear bumper, the GT-R slices through the air.

160 KG AERODYNAMIC DOWNFORCE
A redesigned front spoiler, reinforced hood and reshaped side sills, all deliver increased downforce for more grip and superior airflow and cooling management: racing technology gives a first-rate feeling of stability, confidence and control.

THE AIR CAN’T BELIEVE ITS EYES
You see a 2017 GT-R. With an undeniable presence and stance. But to the air, it looks like a low-slung, mid-engine exotic with barely room for two, let alone four. The Nissan GT-R team spent two years at the Lotus Group’s rolling-road wind tunnel in Europe and 1.5 in Yoshitaka Suzuka in Japan to bring the secrets of supercar aerodynamics to the street.

ALL NEW STANDARD LIGHTWEIGHT TITANIUM EXHAUST ENHANCES COOLING.

REAR SPOILER CREATES DOWNFORCE TO INCREASE TRACTION.

REINFORCED HOOD TO RETAIN SHAPE AND SMOOTH AIRFLOW AT HIGH SPEEDS.

INCREASED GRILL OPENING ADDS AIRFLOW TO AID ENGINE COOLING.
IT STAYS WITHIN THE LINES
Look closely and you can see the obsession: subtle changes for 2017 that enhance confidence, control and stability.

IT BREAKS ALL THE RULES
What you can’t see is equally impressive. Air underneath the body is used to create downforce, pulling the GT-R to the road and helping to cool key components.

RESHAPED HOOD
Longer with reshaped scoops to increase airflow to engine compartment.

REINFORCED HOOD
Stiffened to retain shape at high speeds and increase downforce.

REDESIGNED SIDE SILL
Prevents air being drawn under vehicle to enhance crosswind stability and increase downforce.

C-PILLAR LENGTHENED
Prevents vortex from being created for cleaner airflow around upper body.

REAR BUMPER LIP
Reduces drag at the end of the vehicle to help the exhaust run cooler.

MOLDED HEAT-RESISTANT UNDERCOVER
Helps accelerate air underneath the vehicle to cool and create downforce.

IMPACT-RESISTANT POLYPROPYLENE FRONT UNDERCOVER
Helps protect components and direct air towards the rear.

OPEN AIR SECTION
Key components, including parts of the exhaust, remain open for maximize cooling.

POLYCARBONITE REAR UNDERBODY PANEL
Helps accelerate air underneath the vehicle to cool and create downforce at rear axle.

TRANSAXLE UNDERCOVER
Heat-resistant Carbon-Sheet Molded Compound helps create downforce and adds stiffness.

EXHAUST AIR GUIDE DUCT
Draws in air to help cool transaxle and exhaust.

REAR DIFFUSER
Drives under-car flow, increases downforce.

CARBON FIBER REAR DIFFUSER TRAY
Carbon fiber helps accelerate air underneath and away from the GT-R to cool and create downforce.
CREATING A SEAMLESS EXPERIENCE
THE MOMENT YOU GET IN.

It’s a supercar that takes your breath away – even when sitting still. From a tradition of craftsmanship comes the GT-R’s dashboard, made from a single Nappa leather hide, hand-selected for tone and free of the slightest imperfection. Gently folded, the piece requires less padding, which improves your view, saves weight and creates a stunning work of art.
COMPLETELY CAPTIVATING.
EVEN AT REST.
DECADES TO PERFECT. GRATIFICATION IN AN INSTANT.

There’s mastery in every detail in the GT-R. Turn an air vent designed and developed by a quality expert to operate flawlessly for years. Rotate a switch, subtly etched on the outside to enhance its feel or follow the perfect path of hand stitching around the supple leather trims - it’s an elevating experience.

Luxury sits comfortably with performance. Take the 2017 GT-R front seats - lighter to enhance the power-to-weight ratio, redesigned for more comfort and support and available in semi-aniline leather.
ARTFULLY STATE OF ART.

GT-R’s 11-speaker Bose® audio system was designed with the vehicle itself. The die-cast aluminium structures in the doors and behind the rear seats not only make the car incredibly rigid, they also provide an ideal mount for the speakers to guarantee optimum sound. The dual subwoofers between the rear seats were specially developed for the GT-R too, precisely angled to work with the sound of the car itself and use the trunk as a giant bass enclosure.

Music to the ears of anyone who carries more than one passenger: GT-R proves that real-world practicality and staggering performance get along very well. With a usable rear seat and spacious trunk, the GT-R could be more than your supercar – it could be your only car.
LCD SCREEN
Completely redesigned for 2017, the GT-R’s large 8” multi-touch screen puts all the information you need in a single location, including audio, navigation and the driver-configurable Multi-Function Display system.

MODE DYNAMIC SYSTEM
For road, track and almost anything in between. GT-R’s 3-mode system features three switches to allow on-the-fly adjustment of specific parameters for transmission, suspension and VDC stability control. Supercar performance with amazing flexibility – at the touch of switch.

DISPLAY COMMANDER
The Display Commander lets you dial in your world and control key functions through the 8” multi-touch screen. Just rotate the dial or push it to the left or right to scroll through all the menus and move selections around the screen.

ERASING THE LINE WHERE THE DRIVER ENDS AND THE GT-R BEGINS.
Special attention to detail makes the Nissan GT-R feel instantly familiar. Reduced by half of hard switches and controls are easy to access, simple to use and intuitively designed to minimize time looking away from the road and maximize the pure enjoyment of the drive.
VIRTUAL MEETS REALITY

Like everything else in the GT-R, Nissan has rethought the way the driver receives information. Multiple, easily accessed screens generate immediate feedback on key performance parameters.

Proof of the GT-R’s dedication to performance is the factory preset screen: a stopwatch activated from the steering wheel. You can even store your track times on a flash drive using the two USB ports in the centre console.

Five customizable parameters allow you to organise key information on engine performance, acceleration and braking G forces to suit your taste.

CUSTOM VIEW 1
Keep an eye on the engine by viewing turbo boost, oil temperature and pressure.

CUSTOM VIEW 2
Feel the force. Monitor Acceleration Gs, turbo boost and throttle position.

CUSTOM VIEW 3
Go the distance. Keep track of current and historical fuel economy as well as range.

CUSTOM VIEW 4
Ideal for heavy-duty driving. Monitor coolant, oil and transmission fluid temperatures.

CUSTOM VIEW 5
Keep tab of chassis dynamics including cornering and overall Gs and brake pedal usage.

FACTORY PRESET STOPWATCH
Activated by steering wheel controls, so that you can keep your hands on the wheel.
THE ART OF THE HAND-FORMED EXHAUST.

In an era of mass production, the GT-R demonstrates the infinite value of handcrafted expertise. Because of the engine’s prodigious output, enhanced cooling was needed to develop the exhaust. The solution was to use Titanium – a metal that’s notoriously difficult to work with. The GT-R’s standard Titanium exhaust pipe is hand-built by honed specialists and personally fitted to each car: a true piece of performance art.
MASTERY FROM START TO FINISH

To witness the passion, the GT-R’s pure Japanese DNA, simply lift the hood. Only five master craftsmen in the world are allowed to hand-assemble this engine. They are known as Takumi – a Japanese term for a master craftsman with skills perfected over years of painstaking work and dedication. With over 100 years of combined Takumi engine-building experience between them, their passion is very, very strong.

Each GT-R engine is assembled by a single craftsman – and proudly bears a plaque carrying his signature. A guarantee of perfection, each Takumi inspects every piece for quality and precision. “We put our souls into each engine, hoping to deliver that excitement to our customers.”

MASTERY FROM ZERO TO 300 KM/H

To create a vehicle that excels beyond the racetrack, in any kind of weather, as rewarding to a novice driver as a seasoned professional, we brought together the AS Class drivers – the top development drivers at Nissan.

Each driver contributed specialist skills that played a key role at each unique stage, from the autobahn expert who drives at speeds exceeding 300km/hr to the expert who tested GT-R’s refinement when faced with real-world bumps, potholes, tar tips and manhole covers on the “Marketability Course”. At Nürburgring, where the challenges are very extreme, development was entrusted to drivers with thousands of laps under their belt – respectfully known as “ringmeisters” by insiders.
Two clutches. No clutch pedal. A lightening-quick shift. Inside Nissan GT-R’s 6-speed dual-clutch transmission, the clutches work together. When the car’s in an odd-numbered gear (1st, 3rd, 5th), the even-numbered gear (2nd, 4th, 6th) is “pre-selected” and ready to make the shift immediately. The transmission is so smart, it even “blips” the throttle on downshifts to match rpm. Your left leg may not get much exercise, but you’ll have great fun shifting the GT-R.

Power at your fingertips: re-designed steering wheel mounted paddle shifters help ensure that a rapid-fire shift is always easily within reach - regardless of wheel position.
Some consider a static 50/50 balance to be the perfect weight distribution for handling. But Nissan engineers discovered that something closer to a 54 front/46 rear static ratio is ideal. At the precise moment the driver accelerates out of a corner’s apex, the weight distribution shifts rearward and becomes an approximate 50/50 balance. This translates into enhanced tyre contact for better acceleration, quicker turns and a handling feel that’s uniquely GT-R.

570 HORSES ALL RUNNING
IN THE SAME DIRECTION.

The GT-R combines massive grip with the refinement of a true Grand Touring machine. The suspension filters out bumps and noise while still telling you everything you need to know. Steering effort is reduced at lower speeds for easier in-town manoeuvring, while still delivering the precision you want. It all adds up to a supreme balance – an adrenaline rush and feeling of absolute confidence as you charge out of a turn with 570 thoroughbred horsepower and perfect control at your fingertips.

The Nissan GT-R’s ground-hugging aerodynamics and powerful brakes allow it to carry speed much later into the turn. But the real key to its quickness is the All-Wheel Drive’s ability to put the power down much sooner in a corner. Rear-Wheel Drive cars usually require the driver to wait until they exit the corner before applying power.

The GT-R combines massive grip with the refinement of a true Grand Touring machine. The suspension filters out bumps and noise while still telling you everything you need to know. Steering effort is reduced at lower speeds for easier in-town manoeuvring, while still delivering the precision you want. THE SECRET OF SPEED IS MUCH MORE THAN HORSEPOWER

Horsepower and torque are important, but awe-inspiring braking power and handling are the real secrets to rapidity. Look beyond the sheer size of the 390 mm front and 380 mm rear brake rotors, and you’ll see that Nissan has brought some of the biggest ideas in racing to this extraordinary road car.

The brakes feature 6-piston front and 4-piston rear calipers for stronger, more even clamping power – something you’d expect to see on an all-out competition machine. For extreme rigidity with light weight, the caliper is machined from a single “monoblock” of aluminum.

Heat is the enemy of any braking system. It’s not uncommon to see racecar rotors glowing bright red. The Nissan GT-R’s cross-drilled rotors feature ingenious, diamond-shaped ventilation ribs to pull away heat, while a full-floating rotor allows the outer disc to expand away from the hub, helping reduce the tendency of the rotor to warp.

Even the design details of the GT-R’s Dunlop SP Sport MAXX GT600 DSST CTT high-performance run-flat tyres are obsessive: a tiny block of rubber added to one of the treads combats tread squirm and gives a more confident, precise feel at the wheel.
When the going gets slippery, most supercars stay in the garage or make a hasty retreat to warmer climes. The GT-R has one of the most advanced All-Wheel Drive systems ever used in a road car to help control the power provided to all four wheels. Combined with an equally advanced stability control system, the result is a superior sense of confidence and more driving days in your calendar.

Biased performance. Instead of the traditional 50/50 torque split between front and rear axles, the Nissan GT-R’s electronically controlled All-Wheel Drive system is designed to provide up to nearly 100% of available torque to the rear wheels and send up to 50% of torque to the front wheels. This provides the steering feel and response of a Rear-Wheel Drive vehicle – the preferred choice of racing car drivers and serious enthusiasts – while still giving the confidence and control that only an All-Wheel Drive vehicle can offer.
DESIGNED FOR THE EXTREMIST

Putting a sharper edge on the blisteringly quick GT-R, the Track Edition gives you competition quality gear including NISMO wheels, a NISMO-tuned suspension and special body bonding, achieving greater stiffness. On the outside, the dry carbon-fiber rear spoiler provides downforce, and is a work of art in its own right. Inside, a unique red and black interior featuring grippy and supportive Recaro front seats help hard-wire you to the experience.
VR38 Twin Turbo Engine
An engine designed to answer the demands of a supercar for the 21st century, the VR38 is high-performance, while still being fuel-efficient and conscious of the environment.

Integrated Turbocharger
An integrated turbocharger is mounted on each bank of the engine. By combining the exhaust manifold and turbocharger into a single unit, the amount of intake and exhaust is optimized. A larger intercooler is installed for more efficient cooling. To ensure there is no turbo lag as torque rises, high-precision electronic controls are employed.

Thermostatically Controlled Oil Cooler System
A scavenger pump decreases by approximately 6.6 pounds (3 kg).

Fuel Efficiency
Compared to the cast-iron liner, the overall weight of friction and weight, while maximizing horsepower and increasing fuel-efficiency. The VR38 features a cast-iron liner, the overall weight of friction and weight, while maximizing horsepower and increasing fuel-efficiency.

Innovative Plasma-sprayed Bore
Plasma Coating Bore
Innovative plasma-sprayed bores are used in each cylinder instead of traditional cast-iron liners. This enhances cooling, reduces friction and weight, while maximizing horsepower and increasing fuel-efficiency. Compared to the cast-iron liner, the overall weight decreased by approximately 6.6 pounds (3 kg).

Independent Intake and Exhaust System
For higher horsepower and better response than a naturally aspirated engine, each side of the VR38 features its own turbocharger, intercooler, and carburetor employing an independent intake and exhaust system for each side of the V6. Intake air flow is increased and exhaust back-pressure is decreased.

Plasma Coating Bore
Innovative plasma-sprayed bores are used in each cylinder instead of traditional cast-iron liners. This enhances cooling, reduces friction and weight, while maximizing horsepower and increasing fuel-efficiency.

Oil Cooler with Thermostat
For optimal control of engine cooling, the VR38 features a thermostatically controlled oil cooler system. A scavenger pump is employed to help keep oil flowing to the turbochargers, even during the strong lateral Gs experienced on a racetrack.

Dry Sump Lubrication System
To ensure stable lubrication for the transmission even when cornering at high Gs, a dry sump lubrication system is employed. The system sprays transmission oil directly onto the gears, reducing friction and increasing reliability.

ATTESA E-TS All-Wheel Drive System
The ATTESA E-TS is a Rear-Drive biased system that can vary torque split from 0:100 to 50:50 depending on speed, lateral acceleration, steering angles, tire slip, road surface and yaw rate. A CT-R specific yaw-rate feedback control measures the differences between the target yaw rate calculated from steering angle and actual yaw rate detected by the yaw-rate sensor and G sensor and adjusts torque bias to help follow the driver's intended line.

Aerodynamics Performance
Towards Ultimate Aerodynamics
Inspired by Nismo, GT-R's shape has been modified and updated with body parts designed to minimise drag and maximize cooling airflow for premium efficiency in all conditions.

- Front Under Spoiler
- Front Splitter
- Hood
- Side skirts
- C-pillar
- Rear side bumper

Aerodynamics figured prominently in the development of the CT-R. Generally, the lower the coefficient of drag (the resistance to air), the lower the downforce, which aids grip and handling. Thanks to the CT-R's Premium Midship Package, the CT-R was able to create a strong downforce while capping the Cd at 0.26. And by using aerodynamics to actively cool the powertrain and brakes, a better overall performance was made possible.

Body
Multi-material Body Structure
The CT-R's body gets maximum strength from Carbon Aluminum Die-cast Steel, a combination of carbon fiber, die-cast aluminum and steel.

For structural rigidity, aluminum die-cast door inner panels are employed to decrease the amount of deformation during a crash. Die-cast aluminum is also used for the front strut housing and in the front suspension. For added structural rigidity, the suspension's strut tower bar is made of a lightweight carbon composite containing aluminum honeycomb.

LED Super-Wide-Beam Headlights
Developed exclusively for the CT-R, the new headlights feature four LED units to create an extremely natural light, replicating daylight, while also offering increased illumination. The super-wide-beam headlights expand the area of illumination toward the sides of the front of the car, enhancing visibility, especially when cornering. The super-wide-beam’s range is so expansive that front fog lights are no longer necessary. And the three supporting reflectors illuminate a large area of the side of the car without blinding oncoming traffic.

Hyper LED Driving Lights
For greater visibility from other vehicles, the CT-R features hyper LED Driving Lights. Despite their compact size, the LED lights are highly-visible, even in broad daylight.

LED Driving Lights
For greater visibility from other vehicles, the CT-R features hyper LED Driving Lights. Despite their compact size, the LED lights are highly-visible, even in broad daylight.

Anti-chipping Body Coating and Scratch Shield
At the velocity the CT-R can attain, even the smallest stones can cause extensive damage to the vehicle's finish. To keep the CT-R looking new, models finished feature an innovative anti-chipping coating applied to the top of the front grille and the front of the rear fender – the two places most prone to chipping during driving, the body and bumper. In addition, a double clearcoat helps protect the finish. Vehicles finished in Deep Blue Pearl, Gun Metallic, Katsura Orange, Pearl White, Black Pearl, Solid Red and Super Silver feature a Scratch Shield, a clearcoat that is more scratch resistant compared with conventional clearcoats, helping a vehicle maintain its new look for a longer period of time. The paint also repairs fine scratches, restoring a vehicle's surface close to its original state. For the new CT-R, visual appeal is heightened with the addition of a new body color called Katsura Orange.

Handling duties are managed by a sophisticated 4-wheel independent suspension system mounted to high-precision 6-point front and rear subframes. A special Bilstein DampTronic driver adjustable shock absorber system utilizes multiple vehicle information systems to provide appropriate damping forces and a high level of control for a variety of driving situations.

Chassis development also has been continued for 2016, enhancing the sense of “grabbing the road” and enhanced high-speed handling. The front suspension link bush location has been changed, and with a new anti-roll bar the front roll-center height has been reduced, along with a change in spring and shock absorber specifications to lower the center of gravity.

The DampTronic system features three driver-selectable settings – Normal; Comfort, for maximum suspension compliance; or R for sporty driving. For 2016, the suspension tuning has been revised to provide a smoother, more refined ride that also enhances the tires' ability to remain in contact with the road. The system is exceptionally advanced – the electronic controller of the damping force optimally manages 11 types of vehicle data.

The GT-R runs on Dunlop SP Sport Maxx GT 600 DSST CTT ultra-high performance runflat nitrogen-filled tires designed to match the suspension characteristics. Standard tire sizes are 255/40ZR20 front and 285/35ZR20 rear. Taking advantage of GT-R's anytime, anywhere capability, optional Dunlop SP 7010 all-season run-flat tires are offered as part of the Cold Weather Package.

Stopping power is provided by a high-performance braking system developed by Nissan for the GT-R. The system features Brembo monoblock 6-piston front and 4-piston rear calipers. 390 mm front and 380 mm rear Brembo full-floating crossdrilled two-piece rotors and lowsteel high-stiffness brake pads minimize fade and provide intense stopping performance. The calipers utilize racecar-style radial mounting to minimize caliper flex during extreme braking.

The heart of the GT-R's anytime, anywhere performance, the system allows adjustment of the settings at a touch of a fingertip. The transmission, shock absorbers and VDC stability control can each be shifted into three modes: 'R' mode, 'NORMAL' mode and individual modes for each system. Combined with the choice of automatic or manual shifting, these modes give the driver exhilarating performance and control, whether on the circuit, on the highway in the rain or snow, even on rough road surfaces on city streets.

To elevate your drive Active Noise Cancellation helps remove unwanted powertrain noise in the cabin. Combined with available Active Sound Enhancement that helps smooth out and enhance the engine note in the cabin, you can savor the sound of the GT-R like never before.

There may be times when you'd like to attract less attention to the GT-R’s potent exhaust note. A control in the cabin operates a bypass valve that significantly reduces outside exhaust volume–ideal in crowded or urban settings.
